

Testing Instrument for the respondents IT Experts

Software Evaluation: Criteria-based Assessment

A criteria-based assessment gives a measurement of quality in a number of areas. These areas are derived from *ISO/IEC 9126-1 Software engineering — Product quality*¹ and include usability, sustainability and maintainability.

Dear Respondents,

This questionnaire is formulated to collect data on a study titled “**STAYNEST Boarding House Management System**”. Kindly fill out as frank as possible. The data you provide will be treated with an utmost confidentiality.

Thank you for your anticipated cooperation.

Profile of the respondents:

NAME (optional): _____

GENDER: () Male () Female

Position: _____

Office: _____

Please give the performance rating of the “STAYNEST Boarding House Management System” based on the following Software Evaluation: Criteria-based Assessment:

- Usability,
- Sustainability and Maintainability

Usability	4	3	2	1
1. Understandability (Easily understood)				
2. Documentation (Comprehensive, appropriate, well-structured user documentation)				
3. Buildability (Straightforward to build on a supported system?)				
4. Installability (Straightforward to install on a supported system?)				
5. Learnability (Easy to learn how to use its functions?)				

Legend:

- [4] – Very Usable
[3] – Moderately Usable
[2] – Slightly Usable
[1] – Not Usable

Sustainability and maintainability	4	3	2	1
1. Identity (Project/software identity is clear and unique?)				
2. Copyright (Easy to see who owns the project/software?)				
3. Licensing (Adoption of appropriate license?)				
4. Governance (Easy to understand how the project is run and the development of the software managed?)				
5. Community (Evidence of current/future community?)				
6. Accessibility (Evidence of current/future ability to download?)				
7. Testability (Easy to test correctness of source code?)				
8. Portability (Usable on multiple platforms?)				
9. Supportability (Evidence of current/future researcher support?)				
10. Analyzability (Easy to understand at the source level?)				
11. Changeability (Easy to modify and contribute changes to developers?)				
12. Evolvability (Evidence of current/future development?)				
13. Interoperability (Interoperable with other required/related software?)				

Legend:

- [4] – Very Sustainable and maintainable
[3] – Moderately Sustainable and maintainable
[2] – Slightly Sustainable and maintainable
[1] – Not Sustainable and maintainable
